1024 MB Cloud Compute - 95.179.187.33

Has been successfully created!

IPv4 Address: 95.179.187.33

OS: Debian 9 x64 (stretch)

RAM: 1024 MB

Storage: 25 GB

Location: Amsterdam

Label: DMRdreambox

You can access your server using a SSH client (such as Putty for Windows), or via remote console in your control panel. The initial root password to your server can be found in your control panel and we recommend that you change it immediately after logging in.

Please note: The instance may take another several minutes to finish prepping, booting up, and start pinging.

Additional information and other options are available in the members area.
